

Tomáš Zálešák

Senior Software Engineer

I build enterprise-grade software end to end — my passion is choosing the right tool for each problem.

Profile

Senior full-stack software engineer specializing in enterprise-grade software — designed for scalability, security, and stability from day one. I build complete products end to end, from backend architecture and databases to polished frontends and the pipelines that ship them. I've worked across many languages and technologies, and my passion is choosing the right one for the problem at hand.

What I do

Web applications	Complete web applications on a proven enterprise stack — designed, built, and supported for the long run.
Distributed systems	Resilient, cloud-native systems for applications where scalability and throughput are essential — built to keep running as load grows.
Data analysis	Data processing and normalization, automated reporting, and clear, actionable insights your team can act on.
How I work	CI/CD automation across every environment, scalability and security designed in from the start, and Agile delivery in two-week sprints.

Experience

2021–now **Senior Software Engineer, Independent / Freelance**

Full-stack solutions for multiple clients — architecture, domain-driven design, cloud and CI/CD — primarily across .NET and React/TypeScript stacks.

- **Quadient** — cloud e-invoicing platform: many microservices and the team's custom microservice infrastructure, React.js frontends and .NET backends, greenfield projects, scaling, unit/integration/e2e testing, observability with Grafana and Loki, code reviews, and AI-assisted development with Claude Code.
- **Notino** — new solution for managing consumables across all European warehouses: a .NET and Microsoft SQL Server backend (domain-driven design, events, vertical slices) with a React.js frontend; mentoring and repository collaboration and code-style standards.

1/2

- **Disruptive Lab** — full-stack development and consulting: software architecture and domain-driven design in .NET, React.js, Bobril.js, TypeScript and SQL, with cloud and CI/CD.
- **RHBcare** — Next.js web application: web design, SEO, data and customer management, process automation, plus Linux and Windows server administration, databases, automated backups and networking.
- **Y Soft** — consulting on the automated security-scanning solution I originally designed and built (OpenVAS orchestrated with Atlassian Bamboo).

2019–2021 **Software Engineer**, *Y Soft*, Brno

Designed and fully automated dynamic application-security analysis: OpenVAS/Greenbone vulnerability scanning orchestrated by Atlassian Bamboo across a three-VM VirtualBox infrastructure, automatically detecting new vulnerabilities and suppressing false positives; continuously validated against Ubuntu 18.04 running Rocket.Chat. Worked with Linux and Windows administration, React, .NET Core, Java, Python, Bash and PowerShell.

2017–2018 **Software Engineer Intern**, *AutoCont*, Brno

Developed custom modules for Microsoft Dynamics 365 Business Central and automated localization into Czech and English, using Python 3, .NET, TypeScript, JavaScript, Microsoft SQL Server, PowerShell and Bash.

Education

2020–2022 **Mgr. (Master's degree)**, *Faculty of Informatics, Masaryk University*, Brno, *Software Systems Development and Management*

2016–2020 **Bc. (Bachelor's degree)**, *Faculty of Information Technology, Brno University of Technology*, Brno, *Information Technology*

Skills

Backend	.NET (ASP.NET Core, Blazor), C#, Entity Framework Core, SQL, Python 3
Frontend	React, Vue, Solid.js, Bobril.js, TypeScript, Tailwind CSS
Architecture	Microservices, message queues, domain-driven design, vertical slices
Cloud & DevOps	Azure, AWS, Docker, Kubernetes, GitHub Actions, Atlassian Bamboo, Azure DevOps; deployment, scaling, monitoring, logging
Databases	PostgreSQL, Microsoft SQL Server, NoSQL
Security	SecDevOps, automated vulnerability scanning with OpenVAS, CVSS v3
AI & tooling	Claude Code, Codex, OpenCode; monorepos with Nx and Turborepo

Languages

Czech	Native
English	Professional working proficiency

Interests

Sports, especially basketball — I play for BK TJ Spartak Uherský Brod.
